

PMB's JL-100

AUTOMATIC CIGAR HOPPER

For feeding cigars into tipping, banding and film wrapping machines of the PMB-100 System PMB developed an automatic feeding device type JL-100.

This JL-100 is a standard feeder for supplying cylindrical products to an ordinary or a rollband banding machine (S-100/R-100), a film-wrapping machine (C-100), a tipper (TP-100) and/or a cedar wood wrapping machine (W-100). The products are handled very gently.

Feed is intermittent, only one product being supplied in each cycle. Friction and other undesirable effects are practically eliminated. The JL-100 requires no extra drive arrangements, drive being transmitted via the main shaft of the connecting PMB-100 machine.

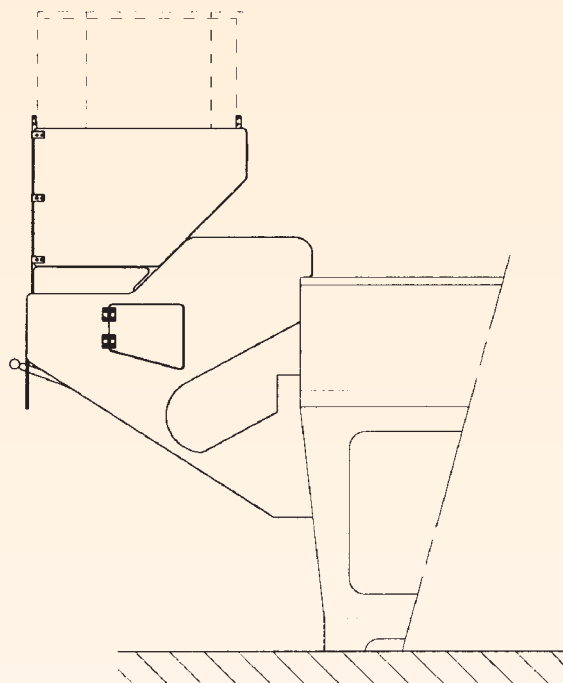

The bunch hopper on the JL-100 can be adjusted for all types of cylindrical products of lengths from 80 to 250 mm. The diameter of the product is limited only by capacity of the following machine. The capacity of the hopper is 1000 products or more, depending on the product diameter.
